Comments: I strongly object to this project. This is a critical time for our planet and human survival and we need to be supporting forests not clear cutting them. The project goals are vague and it is clear this is just a grab of resources by the private sector that actively harms everyone.

Further, why was there no collaboration with YVFC, especially given that collaboration is a key requirement under the Healthy Forest Restoration Act? We requested this collaboration back in July, when we began noticing trees being painted, often in mature and old-growth forests.

The proposed units are primarily located adjacent to private property, yet landowners have not been contacted to discuss how shared management goals, under the "Good Neighbor Authority," could be integrated.

This is a short sighted project that will have a negative impact centuries into the future.
