Title:

Comments: RE Canyon Forest Restoration Project

Endangered Species Act - will have adverse impacts on the Northern Spotted Owl, Marbled Murrelet, and Bull Trout critical habitat. We have worked hard and adjusted to enable wildlife and their habitat to thrive. We cannot go backwards and ask for collaborate work with biologists in the field.

NEPA violations: Holding an Environmental Policy and Assessment BS degree and working as an Engineer in an international company, presenting options including no action is a provide method. Genuine interest in solutions for all seeks input and agreement is found with solutions with the best fit for the most - including the wildlife and wild space.

Clean Water Act: Washington State and partners have worked hard to protect and restore our wild waters. Clean water for humans and critters is vital. Clean water is needed for our flora to thrive too. Riparian zones, temperature protection, oxygen levels, debris and pollution management are critical for today and our future.

National Forest Management Act: Our Nations forests are our treasures and requirements to maintain forest diversity and viable wildlife populations are important for sustained use and left alone for their intrinsic value.

Have integer with your word and be honest with your word and don't mask or mislead the public with wording. Calling this "restoration" while admitting it will "degrade 1,988 acres of habitat" and "remove 25 acres of dispersal habitat" is contradictory and pre-textual.
