Comments: After reviewing the Canyon Forest Restoration Project EA, I was looking for the prescribed fuels treatments for the project area. While the proposed actions of this project seems beneficial, I cannot help but wonder if the fire and fuels report and proposed actions omittance was an oversight or was it intentional? Any restoration or vegetation management project on public lands should include a fuels treatment plan, otherwise you would be setting yourself up for failure. Please provide a response to the reason why it is not included in the assessment, yet it was for previous vegetation management related projects on the Olympic NF like the Wynoochee Restoration and Road Maintenance, Lower Skokomish Vegetation Management, and Upper South Fork Skokomish Vegetation Management Projects. These reports and recommendations are necessary to prevent catastrophic fire events as seen in the Bear Gulch area this year while supporting the purpose and the need of this project. I implore you to ensure that implementation of fuels maintenance be considered. Thank you for this opportunity to comment and I look forward to your response.
