Comments: To all those working to put this project in action, first of all thank you, second please keep fighting for logging in this incredible part of the world.

I have lived in Yaak for most of my life (25 years) and am now raising my children here. I have a special love for this area, and now a sadness as well. I have watched the mule deer leave its usual mountain tops because it has become too dense for them to feel safe there. The moose are almost nonexistent, while Grizzlies are ruling the woods and also people's properties. Their are far more grizzly human encounters than the FWP will ever know about. And the threat of wildfires is a very real concern for every resident of this area no matter where they fall politically.

We need logging to protect the many animals living in this area and to help them thrive. We must manage our forests now, there is no better time.
