Comments: I think your water quality report said they'd be consistent or at least respect local state water quality standards. Your seasonal streams say they have a 50 foot buffer. Washington state forest practices increased the buffer on nonfish-perennial streams from a variable 50 foot to 75 foot.

Can your team respect this. And check in with the WA Forest Practices Board on what is meant by perennial initiation point.

I think given the Dungeness has instream flow issues it'd be nice if you all could expand on your 2 page water quality report. You can do so much better. Do you want to kill all the salmon downstream? Make America Beautiful Again by protecting our views of Salmon in flowing water. Not salmon stranded.

Thank you for all your work on this project.
