Comments: Its time to allow the timber lands to produce income for starving communities of Oregon. I believe every 6th section was set aside for funds to develop the common school economy. Forest management has not done so. In fact the down side is allowing the burning of public assets. Income should be for the common wealth of the communities and not controlled by non tax paying environmental groups. The whole cascade timber range is becoming a rotting, dead and dying forest. Good forest management needs, cutting trees, road placements and proper management for income and bringing rural starving communities back to life. Thanks db
