Comments: It is difficult to comment on a plan that is not made available on this website. Colorado has already lost enormous amounts of Forest to various blights. We should not be cutting healthy trees for "fire mitigation". This is a possible ruse for "harvesting".
Here in Evergreen we were told there would be fire mitigation and habitat improvement in our Open Spaces. Instead they have been ravaged and habitats destroyed.
Tampering with 195,000 acres of Forestry Lands is more likely to cause irreparable damage than benefit the overall health of a natural forest.
