Comments: I am responding to the 'Pikes Peak Vegetation Management #66359' project within the public comment window. I am highly concerned about several aspects of this . Please consider the following with respect to this project:

The project must stay entirely out of the habitat for listed threatened species, especially their critical habitat!

No logging or road construction should occur in roadless areas!

Higher altitude forests should not be logged, e.g. spruce/fir, bristlecone/limber pine, and lodgepole pine!

Please consider a much smaller project that includes a focus on protecting infrastructure!

Finally, the public needs to be allowed to comment after the analysis of potential impacts has been conducted!

Thank You!
