Comments: Dear FWT Program Leadership, please accept my comments in regard to the Forestwide Thinning Program planned in Western Washington State. As a citizen of this area for several decades, I have witnessed the alarming rate of deforestation in our populated region. This method of forest thinning and subsequent management has proven to be destructive to the downstream human and wildlife populations. The best forest management, is no forest management. We need to allow the natural environment to restore itself and be left alone for future generations to enjoy.
