Comments: Hi

I am an avid backcountry user of the mt baker Snoqualmie national forest. In the summer I hike all the trails and ride mountain bikes at summit at Snoqualmie bike park. In the winter I go backcountry skiing and snowmobile. Motorized users are only allowed in certain areas. Many of these areas have been logged in the past. Logging is required for the building products we use every day. The second growth of trees (Christmas trees) creates a space that no one can use. Commercial thinning of old cut blocks not only helps trees grow, but they also create space for outdoor recreation. The areas where snowmobiles are allowed is slowly shrinking with the next generation of trees. Please focus your attention on the areas around the forest roads listed below. Roads

Thank you for time spent on gathering data for areas that you believe thinning would help. Please take time to focus more on motorize areas to help maintain the mountains for future generations.
