Comments: As an ecologist and conservationist, I am deeply opposed to the destruction of 300 square miles of national forests by clear-cutting old growth trees, putting miles of roads in roadless areas and also threatening endangered species. The "Pike's Peak" project doesn't meet the standards of "best available science" for such "fuel reduction" logging supposedly "protecting communities" or "reducing high-severity wildfire." On the contrary, it will increase the destructiveness of wildfires and no amount of money will be able to replace what will be lost. Please cancel this project and instead spend the funding on proven ways to reduce wildfire risk for humans like grants for home hardening and defensible space pruning no more than 100 feet around homes.
