Comments: I will keep this very short. I will let all the other submissions smother you with the scientific data and the scientific justifications to stop this logging project. I am just advocating for some common sense. I don't understand why some people hate nature and are hell bent on destroying what little of the natural world we have left. It's soooo very stupid It's time we just say NO to catastrophic logging projects like this. . The climate is warming , bird numbers are way down, bugs are disappearing, and a lot of species are going extinct. Trees are lungs of the planet. And the Trump administration wants to destroy what little of the natural world we have left? WTF?? Please extract your head from your posterior!!!!
