Title:

Comments: USDA Forest Service:

It has come to my attention that the Forest Service is proposing a large project in the Mt. Baker-Snoqualmie National Forest that involves widespread forest thinning. Please do NOT proceed with this project until a complete and thorough environmental impact study can be reviewed and accepted by environmental watch-dog and advocacy organizations.

As someone who loves and uses this area, I am concerned about the unintended consequences that might arise from an activity that has not been thoroughly vetted.

Thank you for all you do to protect our forests.
