Comments: As I understand it currently, there seem to be many benefits to be derived from this project for the ecosystem in this area, including the human presence along this corridor. I am appreciative of the focus on restoring whitebark pine and the proactive approach to wildfire management. I do also have potential concerns about potential harmful impacts of this project. Should this move forward, I hope it does so in a way that reduces or eliminates in all possible ways negative effects on wildlife, erosion from proposed roadbuilding, and water quality in the Middle Fork, a National Wild and Scenic River, and its tributaries. I am also curious if there will be any collaboration with tribal entities, namely the Blackfeet Nation and the CSKT, which I would consider appropriate and beneficial to this project. I thank you for keeping these concerns in mind, and hope that this project will focus on the ecological benefits it seeks to achieve.
