Comments: The Forest Service must drop its proposed Forest Plan amendment for the White Mountain National Forest as it considers how to address wilderness trail management. Amending the Forest Plan to allow new trails and trail relocation throughout Wilderness could weaken protections for trailless areas, which help protect plants and wildlife, keep Wilderness from being overrun by people, and offer a primitive experience for those who venture into these areas.

The agency must first analyze and create a trail monitoring report, then consider trail management options. Doing so would include site-specific analysis, transparency, and a more informed commenting process.

The Forest Service must conduct site-specific NEPA analysis for all new trails and trail relocations it proposes outside of established trail corridors in Wilderness as it did for the Webster Cliff Trail. Trail relocation in Wilderness outside of designated trail corridors is an exception to the WMNF's Wilderness Plan, and considering trail relocation on an individual basis allows for better analysis of impacts to Wilderness.

The Forest Service should make every effort to relocate trails in Wilderness within established trail corridors. All new trail and trail relocation work in Wilderness should be completed using traditional skills and tools.
