Comments: To those making decisions regarding Forest Plan in regards to wilderness trail management on the White Mountain National Forest in New Hampshire and Maine.

The Forest Service should drop its proposed Forest Plan amendment for the White Mountain National Forest as it considers how to address wilderness trail management. Amending the Forest Plan to allow new trails and trail relocation throughout Wilderness could weaken protections for currently trailless areas, which help protect plants and wildlife, keep Wilderness from being overrun by humans, and offer a truly primitive experience for those who venture into these areas.

The agency should first analyze and create a trail monitoring report and then consider trail management options. Doing so would include site-specific analysis, transparency, and a more informed commenting process.

The Forest Service should instead conduct site-specific NEPA analysis for all new trails and trail relocations it proposes outside of established trail corridors in Wilderness, as it did for the Webster Cliff Trail. Trail relocation in Wilderness outside of designated trail corridors is an exception to the WMNF's Wilderness Plan, and considering trail relocation on an individual basis allows for better analysis of impacts to Wilderness.

The Forest Service should make every effort to relocate trails in Wilderness within established trail corridors.

All new trail and trail relocation work in Wilderness should be completed using traditional skills and tools, rather than motorized and mechanized equipment.

In closing think about the future in terms of many generations to come and what it should like in the future and how it looks now, will it be the same or overrun?. Have you noticed that wilderness is shrinking and our love of this planet and respecting it also shrinking. We have to stop doing this for the sake of our children, their children, and their children so forth and so on. Please and thank you,

John Sanborn
