Comments: As a professional botanist and conservation specialist I object to this project due to the environmental risks it poses to the lake ecosystem, and the the biological ecosystems in Piermont, NH. As a concerned citizen, and somebody with a vested interest in preserving the beauty of this and other forests in New Hampshire I also object to the plan proposed by the forest service. To log this tract of forest would be an abandonment of sense and a betrayal of the public who depend on these pristine lands for recreation, and general sanity. Logging this forest will leave a scar on this community for the next 50 years, and people who have grown to love this land will likely never be able to see it recover before dying. Forests don't heal overnight..... please halt this plan.
