Title:

Comments: I am supportive of a management plan to improve experiences for climbers and protect resources. A few things to please take into consideration-

The need for science-based, adaptive wildlife closures that reflect current research and site-specific conditions

The need for clear criteria, timelines, and appeal processes for new route approvals and trail development and closures

The need to apply science to climbing infrastructure decision making. Existing climbing routes should only be closed or removed if quantitative scientific methods display measurable impacts

Thank you
