Comments: Hello The Sunny Oakes project a spinoff of the Buckeye timber project. The symmes creek water shed will be impacted be this timber project increasing flooding in an already flooded area espically Aid ohio for up to 3 years of each application. This could have a determint effect on the lives, homes and businesses in this project area. The clay soils open to landslides and extreme runoff. The WNF 1010,000 acreas. The recreation oportunities will be highly impacted as on the ecominics of the communities. I believe currently we hhave such low staffing this project does not have the staffing needed for aa complete pproject of success. In recreation areas trails should not be closed off aand bufferrs should be on each side of trails if the prproject is pushed through.
