Comments: I strongly oppose cancelling the Herbert Glacier Cabin project as it would be extremely beneficial to the community of Juneau which already sees high utilization of the existing cabins to the point that it is hard for people find dates to book especially for community members that do not have the financial means to take weekdays off. Additionally cancelling the project seems to be influenced by mining interest across the river which would inherently be hard to make compatible. It appears that the forest service is bending to corporate interests instead of listening to the needs and concerns of the public. If the cabin is not built it will be a shameful act by those involved in its cancellation as there is no reasonable doubt that its tabling isnt a result of catering to mining companies that will inevitably endanger our salmon run and forests.
