Title:

Comments: Herbert Glacier cabin Construction should proceed forward. After reading the reasons for cancellation of construction I don't believe the decision one bit. It was stated that the construction project was basically too difficult for the forest service to do. I don't believe that is a truthful statement. I've seen remote construction sites done by the USFS all over western Lower 48 and Alaska that provided recreational needs for outdoor users. Instead I see or read between the lines the USFS bending to private industry to satisfy greed instead of representing the public's interest and needs.
