Comments: The ODNR Division of Forestry supports the efforts of the Wayne NF to treat non-native invasive plants. Ohio's Forest Action Plan Resource Assessment identified invasive plants as a serious threat to the productivity of Ohio's public and private forests (pg. 78). Actively treating these plants is an important strategy to ensure the public can maintain benefits from public forest lands. The division encourages the Wayne NF to coordinate treatments with partner agencies and private landowners when practical to ensure benefits from treatments can be maintained over time.
