Comments: To extract on an already over extracted land calls for the destruction of the local environment and people's health. This is blatant profit over people decision that does not put the future in mind. This will cause damage to the local wildlife, land, water, people's health, and recreational activities. Destruction of history and destruction of Indigenous history. Sacred Lands Protection is a treaty right that is in violation. If you believe in profit over people then you understand that destruction in a land that brings hundreds of tourist dollars will hinder the local economy. Extraction is not a renewable option and what will happen to the local population when we have taken everything and left it worse.
