Comments: Hello, I am a resident of Bath County. About two years ago, I believe it was spring of 2024, the Forest Service set daily prescribed fires near my house. Air quality was terrible for about 10 days. I could not spent time outside due to thick smoke. This was a health concern for me and my family and impacted our quality of life.

It appears the Big Piney Vegetation Management Project is also near my house, and I see that 7,161 acres are planned to be burned. The impacts of the smoke need to be mitigated so myself and family as well as other residents do not suffer days of smoke resulting in detrimental health and quality of life impacts.
