Comments: I oppose the proposed widespread commercial Forest Thinning of the Mt Baker-Snoqualmie National Forest. I am concerned that it targets mature trees rather than just reducing overcrowding. It will degrade ecosystems and endanger wildlife by damaging habitat not with just cutting the trees but with heavy equipment and road building - 24 miles of road construction on this project. I believe it prioritizes commercial logging profits over ecological restoration, recreation and tourism, and the benefits to our climate. We have a Northwest Forest Plan. We should not vary from that until there is a complete EIS for a new plan with oversight.
