Comments: USFS, thx for opportunity to comment on this project... albeit comment period is too short.

Overall this project looks to be good and overdue, sadly not done sooner before recent fires.

I saw no mention of cutting Old Growth timber, which maybe is meant by LSR?

As a rule I don't support cutting Old Growth or LSR's, as you are aware they are the most fire resistant and unfortunately the most commercially valuable.

LSR status depends on more than DBH, but rather altitude, climate etc.

IF LSR are <24" DBH, cutting/thinning this DBH should be re-considered as they will begin to contribute to Old Growth habitat, unless absolutely necessary to prevent crown fires.

This comment presumes the safe handling of Controlled Burns, and truthful/complete evaluation of the project in this EA.
