Comments: This is about the mining in Garland County. Mainly the Jessieville/ Navy landing area. We haven't been able to ride any type of atv/Utv in a good while due to it causing erosion problems. What do you think will happen when the mining starts. How much erosion do you think will happen between the mining and the heavy equipment running. Lake Ouachita was not built for recreational use, it was built for the use of drinking water. If this passes the use of atvs and utvs needs to changed to where we can ride them. There is less erosion from atv/utv use than there is in mining. To me it just doesn't make sense. I've lived in this area for 30 years not counting the years that my parents and grandparents have lived here. They tried to dig a few years back with no avail. Only that happened was they made the roads worse than what they already were. There are other areas to mine, why in the world would you want mining to happen around the biggest water source in Garland County that supplies water to the residents on city water. That is just straight up asinine to me. So please take this into consideration before you vote on this. There are thousands of people that depend on the water source. We the residents have tried to abide by the laws on the use of atv/utv but if you decide to pass this, the miners better not be on any "closed" roads or us residents are going to be the biggest nightmare you have ever seen.
