Comments: I am against the logging project in the Jardine area. I hike, walk, and ski in that area often. I have also cut wood to heat our home in that area. The local wood cutting has cleaned up much of the dead trees. That logging project would take firewood away from locals who depend on it to heat their homes. Also, it would destroy the area for the recreation that we all do up there. This is not an 'emergency'. It is yet another boondoggle created by the present regime to enrich cronies. More importantly, no thought has been given to effects on wildlife like Grizzly Bears and Wolverines, both species of concern on the Endangered Species Act. Also, elk, deer, and other wildlife that are hunted will be affected. This logging project is a bad idea all the way around. And you are not listening to any other scientists that you don't pay (for example YNP scientists). drop this poor project. Thank you.
