Comments: I am opposed to further logging projects around Yellowstone National Park. All habitat in the GYE is sensitive habitat under intense pressure from various interests and inhabitants. Preservation of the integrity of what is currently there continues to increase in importance from both a conservation stand point and local economic stability. Residents of the area use these lands year round. Tourists visiting Yellowstone often venture into the wilderness surrounding the park as well. There are certainly better places to undertake such a project besides upon the immediate border of the premier accessible wilderness in the lower 48. Again, no logging around Jardine MT. No new roads in the Absaroka Beartooth.
