Comments: This is my second comment, as I thought of a few more concerns:

1. What will be done to mitigate the possibility of erosion from the logging project? This area feeds into the Yellowstone River. Have steps been taken to protect the Yellowstone fishery and its tributaries?
2. What will be done to stop invasive species from taking over? This is a HUGE concern as invasive move right in after a disturbance like you plan. This needs to be mitigated for years, not just given lip service.
