Comments: Thank you for the ability to comment about Lift 7 replacement in Telluride, Co. I would like to make the request that any new lift have the ability to down-load skiers. The current lift does not do that, but it did for many years. My reason is that the Town of Telluride is planning on putting in a new 900 space parking lot that skiers would use to access Lift 7. It is further away from the current Lift 7 and increases the people to access the lift 3 fold. On days when the conditions are not ideal to ski down the face of the mountain or people are too tired, they have to take the Gondola down. This puts them approximately 8/10 of a mile from their vehicles. They have to take a bus ride, with their skis, boots, poles etc that goes east for a time before it turns and heads back west to town and eventually to the parking lot. This could take 25 minutes once they get on the bus. Down-loading would move people back to their vehicles faster and easier because they'd be back at Lift 7.
