Comments: I have visited the Black Mine Project in the Spring of 2025 during a field trip with 8th graders. The workers took their time to explain and show the students core samples and some of the older pits from the previous mine operation. We saw the exploration equipment they were using to obtain the core samples.

I personally asked many questions while we rode around the mine. The workers there explained all of the big and small things they have to do to comply with rules and regulations. I feel that this mine will be a benefit to our small area.
