Title:

Comments: I am concerned this project will cause issues with the quality and safety of drinking water for Little Rock, Arkansas. Little Rock is a major city and the capital city of Arkansas, therefore I feel Little Rock should set the bar in water quality and livability for the state of Arkansas.

Another concern I have with this project is the degradation of outdoor recreational opportunities in the nearby wilderness. I feel this project does not align (and is at odds) with Arkansas's increasing investment and marketing of outdoor recreation. It is well known the outdoor recreation industry is a large and growing industry. Arkansas is positioned to profit from this. However, I feel this project would jeopardize that.

If Arkansas is to become an outdoor recreation destination, like the state leaders seem to be aiming for, then there should be continuity in the decisions on how the state should use a resources.
