Comments: Im concerned about old growth logging. The plan should include increased second growth harveating and building a future for a sustainable timber harvest. This would need to be very different than the timber industry of the past.

I am also concerned about commercial activity at Shoals Point.

It is upsetting to see strong detail and plan for timber and little plan or emphasis on the things that matter most to people who live here like subsistence harvesting, community use/needs, and fisheries. Please slow down the process so public have sufficient time to engage and participate in the planning process.
