Comments: I would like the Tongass managed to prioritize ecosystem health, wildlife habitat, subsistence use, and fisheries health, including actively restoring and enhancing salmon production.

I don't want there to be old growth logging on the Tongass, especially in areas that support fisheries. Please also keep Roadless Rule protections in place on the Tongass.

I want to see 300-foot harvest buffers on all salmon streams. I want to see the maximum level of protections for all priority fisheries areas. I want USFS to actively manage salmon habitat to restore and enhance salmon production.

Remove all of Kruzof Island from high-use commercial recreation, especially Shoals Point. Kruzof and Shoals Point are beloved by the community of Sitka and are very important location for surfing, camping, hunting, harvesting, hiking and more. It is beautiful, unique, and invaluable, and should be protected. It should absolutely not be made available for high-use commercial recreation.

I also want to see Mt. Edgecumbe kept as a Special Interest Area.
