Comments: I am writing in opposition to the proposed Quartz Mining Project within the Ouachita National Forest. Potential environmental and health impacts raise concerns. The risk of increased sediment in Lake Winona which is a drinking water source is significant. Compromising water quality is unacceptable. Clearing forest land will result in impact to wildlife and soil stability. Converting public lands to industrial use does not serve as conservation and protection of natural resources.

Please reconsider moving forward with this project! Please do not participate in destroying the natural state.
