Comments: I am asking for an Environmental Impact Statement (EIS) for this project. Under an EA, all significant impacts have to be mitigated to a level of insignificance. While there are several mitigations in the EA, I think the wildlife (bi-state sage grouse, mule deer, and pronghorn) will be affected--pushed out of the area and that a lot of the Bodie Hills cusickiella and some Long Valley milkvetch will be ripped out. The Bodie Hills cusickiella thrives in the Burnt Rock area and has a very small range--just the Bodie Hills. The bi-state sage grouse is in the area and it is a candidate species for state and federal listing. The Bodie Hills cusickiella and Long Valley milkvetch are Forest Service sensitive species and classified as rare in Calflora. Please don't overestimate short term gains in favor of long term ecosystem impacts to this special area.
