Comments: The forest service areas around Jardine are of great importance to me. Not only is it where I ski, hike, cut firewood, hunt and enjoy some solitude with my faithful companions but it is also my home. Where I live borders the impacted area. I have seen the lack of maintenance on the road dwindle to nothing as visitation to the Jardine area has skyrocketed. I doubt anything will change other than more large equipment creating an even more hazardous road. It will negatively impact health with a tremendous amount of dust, noise pollution and well being as my winter firewood source will be taken away. There is very little monetary value compared to the cost those of us living in the area will have to incur for many many years. There are proper ways to mitigate a forest but selling to the highest bidder is typically not the answer. Please rethink this from the viewpoint of those living here and not from the point of people living thousands of miles away who have never even stepped foot any where near this area.
