Comments: I am submitting comments against the North Trinity County Community Risk Reduction Project. It is with great alarm that I see that the Project targets areas for recovery of the spotted owl plus areas that were considered off limits to logging. Extensive logging proposed to maintain a healthy forest is failing in every respect. I am a botanist and have collected in this area. The area where logging has occurred is totally impoverished and I found nothing of what I was looking for because of it. The jury about extensive logging the forest to prevent fires has been totally debunked as well. Worst still, I have see first-hand that the loggers work without any kind of oversight from either biologists or forest service people. The place is rugged and being around logging machines is dangerous. So, this is a silent crime destroying and changing our forests forever. We are losing our biodiverse world and the wealth of resources by continuing in this path. I want to r register my strongest opposition to this plan.

Thank you
