Comments: Dear Acting Forest Supervisor,

I am opposed to the North Trinity County Community Risk Reduction Project and ask you to please protect this critical habitat! This current proposal is way too invasive and will have a detrimental impact on our special and rare species like the northern spotted owl.

Please focus on small-diameter vegetation, limiting harvest to trees under 20 inches, using the existing road system, and maintaining 60 to 80 percent canopy cover would reduce fire risk without dismantling the forest that wildlife depends on.

Sincerely,

Marion Anthonisen
