Title:

Comments: I fully support these wildfire prevention efforts. They are effective, common sense, and necessary in the state of drought we face. It is much more cost effective and responsible to mitigate fire risk proactively than to react to an unfortunate catastrophe. In this scenario, wildfires stand a great chance of quick management. Whereas if this project did not occur as planned, wildfires would be much more difficult to mitigate, possibly causing significant harm. Thank you for your work and I wish those on this project success!
