Comments: Dear US Forest Service,

I absolutely oppose the use of any National Forest Lands for development of oil or gas drilling, or mining, or other extractive activities that jeopardize the health of our forests. As everyone well knows, we need to get away from fossil fuels and work toward sustainable forms of energy generation, if we want to survive and thrive on this planet. We must do everything we can to stop climate change and preserve ecosystems whose complex interactions are the basis for not only the survival of millions of living things but humanity itself.

Please cease and desist from all plans that threaten our planet and our quality of life.

It's actually more profitable to support green energy solutions! Why can't you see that?
