Comments: Good morning. I am disturbed to read that there is consideration to explore for oil and gas in Medicine Bow-Routt National Forest. I strongly feel that National Forests should stay pristine, protected for future generations. Oil exploration will ruin the scenery, lead to potential oil leaks and spills, harm the environment, scare away the wildlife. There is plenty of land that the oil companies are drilling on. WE need to preserve land where we can!

Thank you,

James Gross.
