Comments: I am writing to express my opposition to the use of fire as a means to prevent fire in Big Cottonwood Canyon. This is a serious public health hazard and I sincerely hope that you will reconsider your decision and will make every effort to find a holistic solution. Treating our watershed areas with pesticides or herbicides must be absolutely banned. Our air quality is compromised enough as it is. Please consider the devastating consequences on the health of Utah residents, especially our younger generations. There are other effective methods for fire prevention, such as structural hardening, that would aid in prevention without endangering public health and safety.
