Title:

Comments: My concerns for the proposed project are concerns for public health. The proposed fire breaks and thinning, etc. will pollute the air. Air that is already heavily polluted and gets more polluted daily as the great salt lake shrinks. I also am concerned about the effects the carbon soot will have on melting snowpack. Plus, the canyon will be damaged from an aesthetic point of view. There should be a longer comment period, I just learned about all this today, and my friends and neighbors and family will likely also want to learn more and comment.
