Comments: I am concerned about the burn plans for Big Cottonwood Canyon planned for Spring and Fall.

Having lived with the smoke from fires these last few days, I know they are a danger where I live in a Care home which includes the elderly and sick. I can't imagine that ongoing exposure, and I can't see how that would be helpful in comparison to the fires that may naturally pop up in our city areas. Having grandchildren with serious asthma, that are living with daily treatment and air purifiers, this is a poor idea. I encourage to think beyond the forests, but into the effect of the many people who cannot live with the amount of smoke you are considering, day after day. Thank you
