Comments: This is a good opportunity for jobs in the Avon, Elliston area to help keep our youth here!

The company is reputable and successful with other mines sites. I've been to the core drilling sites, they are very clean and they are reclaiming leaving no footprint. U.S based company, very important vs foreign of which we have less control. They will come if we run this company out! The only impact will be more traffic. Once the mine opens it will generate more income for the county for road maintenance. No impact to water. This is not projected to be an open pit, so no ground or wildlife impact. The false scare mongering propaganda needs to stop! When it was an wolf impact study all those folks in attendance called B.S. When it was a subdivision EA study and all those folks wanted to buy their 20 acres, they all called B.S. The rest in attendance aren't even impacted. They're like the official propaganda folks called to create and reinforce the lies. We had the large mine operation using our property for years, no bad impact and in fact where a very large percentage of Avon and Elliston's ancestors were employed. Our towns founded on mining and logging and perhaps generations wouldn't be here today if they bought in to lying propaganda!
