Comments: I have some very serious concerns about the Blue Copper Project. My first one is about the amount of water used out of an already very strained water system. And how is that going to affect everyone that has had water rights long before this time and the amount of water they get to use?? Next there are going to be so many displaced wildlife from all the construction going on this is a very large area of wilderness that will be totally disrupted. It will cause ripple effect in the whole ecosystem. And then what about our fish in those streams they are taking so much water from and we have had restrictions on this water system due to low water levels and the effects it's having on the fish so how can they take that much water out when there is not that much water to give them. Next how do you plan on making travel on highway 12 and 141 not become more of a safety issue than those roads are. There is more and more traffic on our roads and that has resulted in more accidents and deaths and that is going to add a significant amount of extra vehicles small and large on those roads. This is a huge thing and I am honestly concerned the lack of notification to the surrounding communities about this. There is so much at risk here that I would have type pages and pages and still probably not list all of the different concerns and issues this project will in fact create. This is going to have have a huge possible permanent impact on our small communities as in a large population growth that these towns are not set up for in anyway and that these small towns do not want and have made it very clear that we do not want that kind of growth. But most importantly this some of the best wilderness and wildlife habitats that we have and this state is loosing places like this too quickly and I feel we need to do a better job protecting our wilderness and wildlife and our waterways. This is not just our home. I think it's a shame that this is being pushed like it is and I feel like it was trying to be snuck underneath the noses of the public. This is absolutely not ok. Consider the big picture and all that will be affected by this.
