Comments: Hello and thank you for the opportunity to provide comment.

This project is long overdue. Please fast track this plan. Any environmental impact can and will be negated with the appropriate onsite or offsite mitigation. Bear mountain is underutilized in the summer and could provide welcome economic stimulus to the region. The increased access to the National Forrest is welcomed and required for all socio-economic populations. The region is always susceptible to illegal or unwanted environmental distress due to illegal trails, etc. Connecting the two mountains with clear boundaries should benefit all while providing protection and reduce the likelihood of trail cutting, etc.

Thank you to the NFS and all concerned in promoting this plan.
