To whom it may concern,
I urge you to conduct an up to date analysis at the long term impacts that this extension could have on the park city school district and the surrounding community. If this permit is to be around for another 42 years than the data should be up to date as all the information is outdated and the values of properties have increased along with the taxes. The environmental impact statement should consider the effects it will have on not only our schools, but also our transportation systems, housing, and local taxpayers. After conducting up to date analyses then consider if this mitigation plan is still fair, as our local taxpayers have shouldered the cost of mine related families moving into our district  for nearly 30 years.
